AYUSH SHARMA

Software Development Engineer II | Distributed Systems | Fintech, Risk & Lending Platforms

Bangalore, India | +91 9818560014 | sharma.as.ayush@gmail.com | Portfolio | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Software engineer with **3+ years** building distributed **Java and Spring Boot** systems for fraud detection, credit underwriting and BNPL lending at Jupiter Money. Own **12+ production services** that process **1M events a day** at **99.9% uptime**. Shipped work that drove **30% revenue growth**, lifted loan approvals by **15%+**, cut KYC cost by **~25%** and took lending partners live at **₹35 Cr+ a month** in disbursals. Also built an AI on-call agent using **MCP** that cut alert triage effort by **95%**.

TECHNICAL SKILLS

Languages:	**Java**, **Python**, Scala, Kotlin, JavaScript, **SQL**
Backend:	**Distributed Systems**, **Microservices**, **Spring Boot**, **REST APIs**, Event-Driven Architecture, Rules / Policy Engines
AI & GenAI:	**Model Context Protocol (MCP)**, **Agentic AI workflows**, Prompt engineering, AI-assisted coding (Claude)
Data & Streaming:	**Apache Kafka**, Akka Streams, **Apache Airflow**, **Databricks**
Databases:	**PostgreSQL**, **DynamoDB**, **Redis**, **Elasticsearch**, TimescaleDB
Cloud & DevOps:	**AWS** (Lambda, EC2, S3), **Docker**, **Kubernetes**, Spinnaker, **CI/CD**
Observability:	**Prometheus**, **Grafana**, Kibana, Alerting, Incident Response, A/B Experimentation

PROFESSIONAL EXPERIENCE

Software Development Engineer II
October 2026 – Present

Jupiter Money | Loans Tech | Bangalore, India

- Own **12+ production services** processing **1M events a day** across fraud, underwriting and BNPL lending at **99.9% uptime**.
- Built the **BNPL credit line** and credit limit engine from scratch, and used it to take **3 lending partners** live end to end (SuperMoney, GoKwik and ShopSe), driving **30% revenue growth** for the lending business.
- Built a **bank statement income fallback** for applicants whose Account Aggregator consent fails, so they get an income check instead of a decline, **lifting approvals by 15%+**.
- **Cut KYC cost by ~25%** by replacing video KYC with liveness checks for loans under ₹1L and moving DigiLocker traffic to cheaper CKYC, while keeping stricter checks for high-risk users.
- Integrated **6+ third-party fraud and risk signals** (device, identity, telecom, bureau and government data) into onboarding and pre-disbursal checks, **blocking 30% of fraudulent users** at onboarding.
- Integrated separate **ML models for new and repeat customers** into live credit decisioning, **reducing default rates by 10%+**.
- Added a **second DigiLocker vendor** to remove a single-vendor dependency, and built a **KYC quality score** that gives strong KYC better loan terms and extra fraud checks to anomalies.
- Launched lending to **18 to 21 year olds** as a new segment, with an automatic exposure cap at **5% of the SuperMoney portfolio**.
- Migrated co-lending hard pulls from Equifax to **Experian** in a staged rollout (2%, 10%, then 100%) with **no impact on live loans**.
- Built a pipeline for **government blacklist datasets** (FRI and MNRL, **10M+ records**), closing a compliance gap, and moved its sync **from daily to hourly**; every onboarding and loan application is checked against it.

Software Development Engineer I
June 2024 – October 2026

Jupiter Money | Risk Tech | Bangalore, India

- Turned the first partner integration into a reusable template, **cutting partner go-live time from 8+ weeks to about 2**, and took **KSF co-lending** live at **₹35 Cr a month** in disbursals.
- Replaced a hard rule that auto-declined customers with many credit lines with a dedicated policy, **lifting their approvals by 10%+**.
- Built the risk flow for the **RuPay TPAP channel**, so customers with no Jupiter app history can be assessed for loans.
- Shipped **~40 credit policy changes** and new ML underwriting models, **cutting false positives by 20%** and lifting true negatives by 10%.
- Built the team's first automated **exposure circuit breaker**, capping lending per customer segment; it has **triggered 20+ times** in production.
- Built the team's **A/B testing framework** for credit policies (**10+ experiments**) and live dashboards for **10+ risk and fraud models**.
- Added **device and identity fraud signals** to onboarding and loan checks, with safe defaults if the vendor API goes down.
- Fixed a **500GB+ Elasticsearch index** for real-time fraud decisions that had stopped indexing new data, and added shard management and data expiry so it can't recur.
- Found and fixed **3 unhandled production exceptions** and a silent income-data corruption bug through proactive log review.
- Moved Airflow DAGs to Databricks and caching to Redis Cloud, and upgraded Java 17 to 21, **cutting infrastructure cost by 30%**.
- Built an **MCP-based AI on-call agent** (Claude, Grafana, Slack, GitHub, Jira) that runs on every alert and **cuts triage effort by up to 95%**.

Software Development Engineering Intern
November 2023 – June 2024

Jupiter Money | Risk Tech | Bangalore, India

- Built real-time ingestion pipelines with **Kafka** and **Akka Streams** into DynamoDB and PostgreSQL, with **latency under 100ms**.
- Shipped Airflow DAGs, AWS Lambdas and Spring Boot APIs, and **cut deployment time from 30 minutes to 5**.
- Set up **Prometheus, Grafana and Kibana** monitoring for critical pipelines, and supported launches, incident triage and RCAs.

EDUCATION

B.Tech, Computer Science and Engineering
2020 – 2024

Indraprastha Institute of Information Technology, Delhi (IIITD) | CGPA: 8.0 / 10

CERTIFICATIONS, RECOGNITION & ADDITIONAL

- **Best Performer of the Quarter**, Jupiter Money (for consistent delivery and production ownership)
- **ARTPARK Fellowship**, IISc Bangalore (for research contributions)
- **Amazon ML Summer School**, Amazon, 2022 (competitively selected)
- **Teaching Assistant**, Basic Electronics at IIITD (300+ undergraduates)
